

AMENDMENTS TO THE CLAIMS

1  
2 1. (Original) A system for creating and entering log notes  
3 correlated in real time to a digital audio transcription record,  
4 including in combination:

5 at least one selected source of digital recorded audio  
6 signals;

7 a computer including a memory for storing the digitally  
8 recorded audio signals and for allowing the stored digitally  
9 recorded audio signals to be played back, the digitally recorded  
10 audio signals being associated with a date and a running time  
11 corresponding to the time at which the audio signals were recorded;

12 the computer including a memory for storing digital signals  
13 corresponding to the specific individual log notes correlated with  
14 the digital audio signals, the computer associating a time stamp  
15 corresponding to the actual recording of each of the log notes;

16 a display coupled to the computer, with the computer allowing  
17 the display to indicate file entries corresponding to the digitally  
18 recorded audio signals and corresponding to the log notes associated  
19 with unique file entries corresponding to the digitally recorded  
20 audio signals;

21 a play-back selection means associated with the computer  
22 allowing a user to play a desired file entry of digitally recorded  
23 audio signals associated with the corresponding log notes;  
24  
25
